AUS (AUSTRALIAN URBAN SYSTEMS) was established in 2004 by three leading Victorian design and urban planning companies with the strong support of the Department of Innovation, Industry and Regional Development, Government of Victoria, Australia.

It is an organisation made up of leading Victorian firms who are actively involved in providing specialist services in the sustainable urban

development sector in Australia, China and more recently the Middle East. AUS aims to develop and promote best practice in planning and design for sustainable cities of the future, drawing on the particular experience established in Melbourne and Victoria.

The AUS Cluster of companies have been selected to cover the range of skills reflective of the best practice drawn from the Victorian experience. The capital city

of Melbourne is successfully repositioning itself as a liveable and sustainable centre and a leader in the new knowledge based economies.

Liveability attracts creative and innovative people to a city and in turn creative and innovative people attract high-value industries.

The cluster presently covers the following fields of expertise;

- Economics, Social Planning and Investment
- Urban Planning and Design
- Architecture and Building
- Environmental Design and Engineering
- Urban management
- Education and Research

AUS also enjoys strong support from the Government of Victoria which offers expertise in policy development, urban management and administration. In practice this means that the entire infrastructure of the Victorian Government Departments is available through AUS to support projects and partners.

As a result, AUS is a unique organisation capable of engaging with the entire urbanisation process from individual developments through to large scale regional initiatives.
